

Precision Mould

Precision Mould

Shanghai 3D Precision Mould Manufacturing Co., Ltd is a professional precision mould manufacturer in China. There are mainly three kinds of Precision Mould including stamping and punching die, plastic mould and casting die. In addition, the stamping and punching die is divided into progressive die, compound die, blanking die, piercing die, bending die, drawing and forming die, flanging die. Meanwhile, plastic mould is classified into injection moulding, vacuum forming. Likewise, the casting die adopts pressure die-casting.

Mould equipment, production experience and the ability of mould design are essential to production of Precision Mould. Every detail must be taken into account from the mould design to mould machining so as to bring out the qualified Precision Mould. To produce qualified precision mould, we have imported a broad range of precision equipment, which contains Switzerland's Machining Center, Japanese Wire Cut, Taiwan's EDM and Surface Grinder, as well as other precision mould equipments and a variety of milling machine, lathe, altimeter, granite plate, feeder, punch press, plate shears, centrifugal grinder, and other corollary equipment.

3D Precision Mould has won market recognition through its good performance and complete after-sales service. At the same time, 3D Precision Mould has built long-term cooperative relationship with many well-known Japanese enterprises. Up to now, we have supply our Precision Mould products to a number of renowned enterprises, such as: Japan Siemens, Toyota, Pioneer, Toshiba air-conditioning.
